```

3.6 Theorem

- Kosaraju's algorithm visit the strong connected components in topological order at second dfs.
- Euler's formula on planar graph: $V - E + F = C + 1$
- Kuratowski's theorem: A simple graph G is a planar graph iff G doesn't has a subgraph H such that H is homeomorphic to K_5 or $K_{3,3}$
- A complement set of every vertex cover correspond to a independent set. \Rightarrow Number of vertex of maximum independent set + Number of vertex of minimum vertex cover = V
- Maximum independent set of G = Maximum clique of the complement graph of G .
- A planar graph G colored with three colors iff there exist a maximal clique I such that $G - I$ is a bipartite.

```

8.9 Generating Functions

- Ordinary Generating Function $A(x) = \sum_{i \geq 0} a_i x^i$
 - $A(rx) \Rightarrow r^n a_n$
 - $A(x) + B(x) \Rightarrow a_n + b_n$
 - $A(x)B(x) \Rightarrow \sum_{i=0}^n a_i b_{n-i}$
 - $A(x)^k \Rightarrow \sum_{i_1+i_2+\dots+i_k=n} a_{i_1} a_{i_2} \dots a_{i_k}$
 - $x A(x)' \Rightarrow \sum_{i=0}^n n a_n$
 - $\frac{A(x)}{1-x} \Rightarrow \sum_{i=0}^n a_i$
- Exponential Generating Function $A(x) = \sum_{i \geq 0} \frac{a_i}{i!} x^i$
 - $A(x) + B(x) \Rightarrow a_n + b_n$
 - $A^{(k)}(x) \Rightarrow a_{n+k}$
 - $A(x)B(x) \Rightarrow \sum_{i=0}^n n i a_i b_{n-i}$
 - $A(x)^k \Rightarrow \sum_{i_1+i_2+\dots+i_k=n} n i_1, i_2, \dots, i_k a_{i_1} a_{i_2} \dots a_{i_k}$
 - $x A(x) \Rightarrow n a_n$
- Special Generating Function
 - $(1+x)^n = \sum_{i \geq 0} n i x^i$
 - $\frac{1}{(1-x)^n} = \sum_{i \geq 0} \binom{n-1}{i} x^i$

8.10 Numbers

- Stirling numbers of the second kind Partitions of n distinct elements into exactly k groups. $S(n, k) = S(n-1, k-1) + k S(n-1, k)$, $S(n, 1) = S(n, n) = 1$, $S(n, k) = \frac{1}{k!} \sum_{i=0}^k (-1)^{k-i} \binom{k}{i} i^n$, $x^n = \sum_{i=0}^n S(n, i) (x)_i$
- Catalan numbers $C_n = \frac{1}{n+1} 2nn = 2nn - 2nn + 1$, $\forall n \geq 0$
 $C_{n+1} = \sum_{i=0}^n C_i C_{n-i} = \frac{2(2n+1)}{n+2} C_n$, $C_0 = 1$

8.11 Theorem

- Cayley's Formula
 - Given a degree sequence d_1, d_2, \dots, d_n for each labeled vertices, there are $\frac{(n-2)!}{(d_1-1)!(d_2-1)!\dots(d_n-1)!}$ spanning trees.
 - Let $T_{n,k}$ be the number of labeled forests on n vertices with k components, such that vertex $1, 2, \dots, k$ belong to different components. Then $T_{n,k} = k n^{n-k-1}$.
- Erdős–Gallai theorem A sequence of nonnegative integers $d_1 \geq \dots \geq d_n$ can be represented as the degree sequence of a finite simple graph on n vertices if and only if $d_1 + \dots + d_n$ is even and $\sum_{i=1}^k d_i \leq k(k-1) + \sum_{i=k+1}^n \min(d_i, k)$ holds for every $1 \leq k \leq n$.
- Gale–Ryser theorem A pair of sequences of nonnegative integers $a_1 \geq \dots \geq a_n$ and b_1, \dots, b_n is bigraphic if and only if $\sum_{i=1}^n a_i = \sum_{i=1}^n b_i$ and $\sum_{i=1}^k a_i \leq \sum_{i=1}^n \min(b_i, k)$ holds for every $1 \leq k \leq n$.
- Flooring and Ceiling function identity
 - $\lfloor \frac{\lfloor \frac{a}{c} \rfloor}{b} \rfloor = \lfloor \frac{a}{bc} \rfloor$
 - $\lceil \frac{\lceil \frac{a}{c} \rceil}{b} \rceil = \lceil \frac{a}{bc} \rceil$
 - $\lceil \frac{a}{b} \rceil \leq \frac{a+b-1}{b}$
 - $\lfloor \frac{a}{b} \rfloor \leq \frac{a-b+1}{b}$
- Möbius inversion formula
 - $f(n) = \sum_{d|n} g(d) \Leftrightarrow g(n) = \sum_{d|n} \mu(d) f(\frac{n}{d})$
 - $f(n) = \sum_{n|d} g(d) \Leftrightarrow g(n) = \sum_{n|d} \mu(\frac{d}{n}) f(d)$

- $\sum_{d|n}^{n=1} \mu(d) = 1$
- $\sum_{d|n}^{n \neq 1} \mu(d) = 0$

- Spherical cap

- A portion of a sphere cut off by a plane.
- r : sphere radius, a : radius of the base of the cap, h : height of the cap, θ : $\arcsin(a/r)$.
- Volume = $\pi h^2(3r-h)/3 = \pi h(3a^2 + h^2)/6 = \pi r^3(2 + \cos \theta)(1 - \cos \theta)^2/3$.
- Area = $2\pi r h = \pi(a^2 + h^2) = 2\pi r^2(1 - \cos \theta)$.
