39            }

```

### 3.6 Theorem

- Kosaraju's algorithm visit the strong connected components in topological order at second dfs.
- Euler's formula on planar graph:  $V - E + F = C + 1$
- Kuratowski's theorem: A simple graph  $G$  is a planar graph iff  $G$  doesn't has a subgraph  $H$  such that  $H$  is homeomorphic to  $K_5$  or  $K_{3,3}$
- A complement set of every vertex cover correspond to a independent set.  $\Rightarrow$  Number of vertex of maximum independent set + Number of vertex of minimum vertex cover =  $V$
- Maximum independent set of  $G$  = Maximum clique of the complement graph of  $G$ .
- A planar graph  $G$  colored with three colors iff there exist a maximal clique  $I$  such that  $G - I$  is a bipartite.

22     ans.pop_back();
23 return ans;
24 }

```

```

37 }
38 };

```

## 5.4 Theorem

- Pick's theorem: Suppose that a polygon has integer coordinates for all of its vertices. Let  $i$  be the number of integer points interior to the polygon,  $b$  be the number of integer points on its boundary (including both vertices and points along the sides). Then the area  $A$  of this polygon is:

$$A = i + \frac{b}{2} - 1$$

## 8.5 Generating Functions

- Ordinary Generating Function  $A(x) = \sum_{i \geq 0} a_i x^i$

$$\begin{aligned}
 & - A(rx) \Rightarrow r^n a_n \\
 & - A(x) + B(x) \Rightarrow a_n + b_n \\
 & - A(x)B(x) \Rightarrow \sum_{i=0}^n a_i b_{n-i} \\
 & - A(x)^k \Rightarrow \sum_{i_1+i_2+\dots+i_k=n} a_{i_1} a_{i_2} \dots a_{i_k} \\
 & - xA(x)' \Rightarrow n a_n \\
 & - \frac{A(x)}{1-x} \Rightarrow \sum_{i=0}^n a_i
 \end{aligned}$$

- Exponential Generating Function  $A(x) = \sum_{i \geq 0} \frac{a_i}{i!} x^i$

$$\begin{aligned}
 & - A(x) + B(x) \Rightarrow a_n + b_n \\
 & - A^{(k)}(x) \Rightarrow a_{n+k} \\
 & - A(x)B(x) \Rightarrow \sum_{i=0}^n n i a_i b_{n-i} \\
 & - A(x)^k \Rightarrow \sum_{i_1+i_2+\dots+i_k=n} n i_1 i_2 \dots i_k a_{i_1} a_{i_2} \dots a_{i_k} \\
 & - xA(x) \Rightarrow n a_n
 \end{aligned}$$

- Special Generating Function

$$\begin{aligned}
 & - (1+x)^n = \sum_{i \geq 0} n i x^i \\
 & - \frac{1}{(1-x)^n} = \sum_{i \geq 0} i n - 1 x^i
 \end{aligned}$$

## 8.6 Numbers

- Stirling numbers of the second kind Partitions of  $n$  distinct elements into exactly  $k$  groups.  $S(n, k) = S(n-1, k-1) + kS(n-1, k)$ ,  $S(n, 1) = S(n, n) = 1$ ,  $S(n, k) = \frac{1}{k!} \sum_{i=0}^k (-1)^{k-i} \binom{k}{i} i^n$ ,  $x^n = \sum_{i=0}^n S(n, i)(x)_i$
- Catalan numbers  $C_n = \frac{1}{n+1} 2n n = 2n n - 2n n + 1$ ,  $\forall n \geq 0$   
 $C_{n+1} = \sum_{i=0}^n C_i C_{n-i} = \frac{2(2n+1)}{n+2} C_n$ ,  $C_0 = 1$

## 8.7 Theorem

- Cayley's Formula

- Given a degree sequence  $d_1, d_2, \dots, d_n$  for each *labeled* vertices, there are  $\frac{(n-2)!}{(d_1-1)!(d_2-1)!\dots(d_n-1)!}$  spanning trees.
- Let  $T_{n,k}$  be the number of *labeled* forests on  $n$  vertices with  $k$  components, such that vertex  $1, 2, \dots, k$  belong to different components. Then  $T_{n,k} = kn^{n-k-1}$ .

- Erdős–Gallai theorem A sequence of nonnegative integers  $d_1 \geq \dots \geq d_n$  can be represented as the degree sequence of a finite simple graph on  $n$  vertices if and only if  $d_1 + \dots + d_n$  is even and  $\sum_{i=1}^k d_i \leq k(k-1) + \sum_{i=k+1}^n \min(d_i, k)$  holds for every  $1 \leq k \leq n$ .

- Gale–Ryser theorem A pair of sequences of nonnegative integers  $a_1 \geq \dots \geq a_n$  and  $b_1, \dots, b_n$  is bigraphic if and only if  $\sum_{i=1}^n a_i = \sum_{i=1}^n b_i$  and  $\sum_{i=1}^k a_i \leq \sum_{i=1}^n \min(b_i, k)$  holds for every  $1 \leq k \leq n$ .

- Flooring and Ceiling function identity

$$\begin{aligned}
 & - \lfloor \frac{\lfloor \frac{a}{b} \rfloor}{c} \rfloor = \lfloor \frac{a}{bc} \rfloor \\
 & - \lceil \frac{\lceil \frac{a}{b} \rceil}{c} \rceil = \lceil \frac{a}{bc} \rceil \\
 & - \lceil \frac{a}{b} \rceil \leq \frac{a+b-1}{b} \\
 & - \lfloor \frac{a}{b} \rfloor \leq \frac{a-b+1}{b}
 \end{aligned}$$

- Möbius inversion formula

$$\begin{aligned}
 & - f(n) = \sum_{d|n} g(d) \Leftrightarrow g(n) = \sum_{d|n} \mu(d) f\left(\frac{n}{d}\right) \\
 & - f(n) = \sum_{n|d} g(d) \Leftrightarrow g(n) = \sum_{n|d} \mu\left(\frac{d}{n}\right) f(d) \\
 & - \sum_{d|n}^{\neq 1} \mu(d) = 1 \\
 & - \sum_{d|n} \mu(d) = 0
 \end{aligned}$$

- Spherical cap

- A portion of a sphere cut off by a plane.
- $r$ : sphere radius,  $a$ : radius of the base of the cap,  $h$ : height of the cap,  $\theta$ :  $\arcsin(a/r)$ .
- Volume  $= \pi h^2(3r-h)/3 = \pi h(3a^2+h^2)/6 = \pi r^3(2+\cos\theta)(1-\cos\theta)^2/3$ .
- Area  $= 2\pi r h = \pi(a^2+h^2) = 2\pi r^2(1-\cos\theta)$ .
