3.6 Theorem

- Kosaraju's algorithm visit the strong connected components in topological order at second dfs.
- Euler's formula on planar graph: $V - E + F = C + 1$
- Kuratowski's theorem: A simple graph G is a planar graph iff G doesn't has a subgraph H such that H is homeomorphic to K_5 or $K_{3,3}$
- A complement set of every vertex cover correspond to a independent set. \Rightarrow Number of vertex of maximum independent set + Number of vertex of minimum vertex cover = V
- Maximum independent set of G = Maximum clique of the complement graph of G .
- A planar graph G colored with three colors iff there exist a maximal clique I such that $G - I$ is a bipartite.
